DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 69-81 and 83-86 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Martinelli et al(4821731). Note, col. 2, lines 50-68, col. 3, col. 6, lines 23-29 and 63-68, col. 7, lines 20-68, col. 8, lines 1-25, col. 9, lines 35-68, col. 10, lines 1-15.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 82 is rejected under 35 U.S.C. 103(a) as being unpatentable over Martinelli et al(4,821,731) in view of Crowley(5,588,432).

Martinelli et al(4,821,731) teaches the claimed invention. Martinelli et al(4,821,731) does not specifically teach a means for rotating or deflecting the distal end of the catheter.

Crowley(5,588,432) teaches a catheter for imaging and ablation in the heart that includes a means for steering the catheter to the desired location within the body.

Art Unit: 3737

It is well established within the art, to position a catheter within the heart of a patient requires controlling the catheter by bending or rotating the tip of the catheter.

Therefor, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include in the device of Martinelli et al(4,821,731) a means for steering the catheter within the body to ensure safe and accurate positioning of the catheter as is well known in the art and taught by Crowley(5,588,432).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
